How Data Is Used

To anyone who participates in the survey, Thank You! The data provided is combined with those of many other respondents to produce monthly estimates of the number of persons employed in each industry, their Average Earnings, and the Weekly hours for which they are paid. Many economic decisions are based on our estimates of employment, hours, and Earnings.

DATA USES:

- ☒ By business to:
 - compare their current employment and payroll trends with the industry as a whole
 - plan and respond to changes in the business cycle
 - guide decisions on plant locations, sales, and purchases
 - negotiate labor contracts based on industry Hourly earning and Weekly hours
- ☒ By policymakers, such as:
 - Council of Economic Advisors, to assess the current state of the economy and recommend actions
 - Federal Reserve Board, to guide decision affecting interest rates and money supply
 - Joint Economic Committee of Congress, to determine the impact of legislative initiatives
 - state and local government officials, to monitor their industry trends and compare them with the rest of the country
- ☒ Also a major component of other economic indicators, such as:
 - Gross National Product (GNP)
 - Productivity Indexes
 - Composite Index of Leading Economic Indicators

Reminder: Individual firm responses are kept strictly confidential and are used only for statistical purposes.

If you are interested in participating or need more information about Current Employment Statistics publications and news releases, contact the Department of Workforce Development/Research and Analysis, Current Employment Statistics (CES) at 317-232-7715.

Sector to NAICS Supersector Aggregation

GOODS-PRODUCING

Natural Resources and Mining

Sector 1133 (Logging—actually an industry, rather than a sector)

Sector 21 (Mining)

Construction

Sector 23 (Construction)

Manufacturing

Sector 31-33 (Manufacturing)

SERVICE-PROVIDING

Trade, Transportation, and Utilities

Sector 42 (Wholesale trade)

Sector 44-45 (Retail trade)

Sector 48-49 (Transportation and warehousing)

Sector 22 (Utilities)

Information

Sector 51 (Information)

Financial Activities

Sector 52 (Finance and insurance)

Sector 53 (Real estate and rental and leasing)

Professional and Business Services

54 (Professional, science, and technical services)

Sector 55 (Management of companies and enterprises)

Sector 56 (Administrative and waste services)Sector

Education and Health Services

Sector 61 (Education services)

Sector 62 (Health care and social assistance)

Leisure and Hospitality

Sector 71 (Arts, entertainment, and recreation)

Sector 72 (Accommodation and food services)

Other services

Sector 81 (Other services, except public administration)

Government

About Metropolitan and Micropolitan Statistical Areas

The United States Office of Management and Budget (OMB) defines metropolitan and Micropolitan statistical areas according to published standards that are applied to Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on application of 2000 standards (which appeared in the **Federal Register** on December 27, 2000) to 2000 decennial census data. Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003.

Standard definitions of metropolitan areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation “standard metropolitan area” (SMA). The term was changed to “standard metropolitan statistical area” (SMSA) in 1959, and to “metropolitan statistical area” (MSA) in 1983. The term “metropolitan area” (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The term “core based statistical area” (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas. OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, Department of Commerce. The standards for defining metropolitan areas were modified in 1958, 1971, 1975, 1980, 1990, and 2000.

Defining Metropolitan and Micropolitan Statistical Areas

The 2000 standards provide that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a “central county” (counties). Additional “outlying counties” are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic “building blocks” for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico.

If specified criteria are met, a metropolitan statistical area containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as “metropolitan divisions.” As of June 6, 2000, there are 362 metropolitan statistical areas and 560 micropolitan statistical areas in the United States. In addition, there are 8 metropolitan statistical areas and 5 micropolitan statistical areas in Puerto Rico.

Principal Cities and Metropolitan and Micropolitan Statistical Area Titles

The largest city in each metropolitan or micropolitan statistical area is designated a “principal city.” Additional cities qualify if specified requirements are met concerning population size and employment. The title of each metropolitan or micropolitan statistical area consists of the names of up to three of its principal cities and the name of each state into which the metropolitan or micropolitan statistical area extends. Titles of metropolitan divisions also typically are based on principal city names but in certain cases consist of county names.

Changes in Definitions over Time

Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of:

- the recognition of new areas as they reached the minimum required city or urbanized area population, and
- the addition of counties (or cities and towns in New England) to existing areas as new decennial census data showed them to qualify.

In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data. However, Census Bureau data serve as the basis for intercensal updates in specified circumstances.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For some purposes, comparisons of data for areas as defined at given dates may be appropriate; for other purposes, it may be preferable to maintain consistent area definitions. Historical metropolitan area definitions are available for 1999, 1993, 1990, 1983, 1981, 1973, 1970, 1963, 1960, and 1950.

Technical Notes

Benchmark Data. Employment estimates based on sample data are compared annually with complete count of employment by industry. Where revisions are necessary, monthly estimates are adjusted to the benchmark. Following revisions to the new benchmark, industry data are estimated forward to the current month by use of sample trends. The basic source of benchmark data is employment by industry and area from tax reports of employers covered by the Indiana unemployment compensation laws. This benchmark is based on March 2005 data .

Employment estimates for nonagricultural industries are derived from a monthly survey of over 6,700 employing establishments and include full time and part-time wage and salaried workers who worked or received pay for the pay period including the 12th of the month. Current month estimates may be revised slightly if additional data received in the following month warrant a change, and may be revised when new benchmarks are constructed annually. Employment is classified using the 2002 North American Industry Classification System. Due to rounding, the sum of individual industry items may not equal totals.

Participating employers report “all employees”, “nonsupervisory workers”, and “gross payroll” and hours data for the pay period including the 12th of the reference month. “All employees” include salaried officials of corporations; executives and their staffs; persons on paid vacation, paid sick leave, other paid leave; part time employees and trainees. Excluded from “all employees” are proprietors, pensioners, unpaid family workers, partners of unincorporated firms, persons on strike the entire pay period, armed forces personnel on active duty the entire pay period, outside contractors to the reporting unit (and the contractor’s employees), domestic workers, and persons employed on farms. “Nonsupervisory workers” include every employee except those whose major responsibility is to supervise, plan or direct the work of others. Employment estimates are calculated from the “all employees” data submitted by employers. Hours and earnings estimates are calculated from payroll and hours worked data reported for “nonsupervisory workers”.

Statewide and metropolitan statistical area hours and earnings estimates are published for those industries where the sample size is judged adequate to both ensure an accurate estimate and preserve the confidentiality of the individual reporter. Employment, hours and earnings series are reviewed on an annual basis to assure there is adequate sample to publish the data without revealing confidential data.

The scope of the estimates for employment, hours, and earnings produced for the fourteen statistical areas is the same as the statewide scope, except the estimates for each respective area contain data only for the counties in that area.
